

Complete Dentistry For The Entire Family!

## ***Straighten Natural Teeth Quickly & Comfortably!***

For those who desire a naturally-appealing and healthy smile, Invisalign is the most comfortable method to straighten teeth. An FDA-cleared system that straightens teeth without wires and brackets, Invisalign also realigns teeth at a pace that is faster than traditional braces.

Invisalign combines 3-D computer technology with a clear, medical grade polymer to move teeth without the discomfort of braces. They can be removed to eat and clean teeth and are generally undetectable when worn.

Invisalign is recommended for adults and teens who have completed tooth and jaw development. Invisalign has been an especially appealing option for adults who had orthodontic treatment in their youth and have experienced shifting teeth over time.

Invisalign is also appealing for patients with nickel allergies, since traditional brackets contain some components of nickel in the stainless steel. Because Invisalign can be removed for cleaning teeth, patients with special needs find this an easier method to maintain.

Invisalign, the dentist's top choice for straightening teeth without wires and brackets, is also available for teenagers through Dr. Barbat.

Like Invisalign for adults, Invisalign Teen is an alternative to traditional braces and generally undetectable when worn. *"Many parents remember the discomfort and awkwardness of wearing braces during their teen years,"* states Dr. Barbat. *"Invisalign Teen removes the misery of wires and brackets along with the self-consciousness that accompanies that look as well."*

Since Invisalign Teen is removable, teens are also better able to maintain their oral health throughout the process. This helps them avoid plaque buildup that can result in cavities.

**Dr. Barbat has completed extensive training in Invisalign and Invisalign Teen and is a Certified Provider for both options.**
