

Autumn 2021

Dear Patient,

It's September already with 2021 flying by! To remind those who need to take advantage of **unused insurance coverage**, please make your appointment soon. This way, you can arrange the date and time that's most convenient before things get really busy.

For those who wish to replace missing teeth with **Dental Implants**, our patients enjoy some unique advantages, such as:

- All stages of Dental Implant treatment in one, convenient location
- Oral and I.V. Sedation for optimal comfort
- Advanced technology for optimal implant selection and placement
- Neuromuscular dentistry for ideal positioning in bite alignment
- Final teeth with a natural look and feel
- Biting and chewing function restored

Advanced features that help to optimize Dental Implant outcomes:

CONE BEAM IMAGING

Captures clear, concise 3D views in one pass at the lowest radiation levels possible. These images are ideal for assessing jaw structure for proper angles and depths in implant placement.

DENTAL LASER

Eliminates or greatly minimizes bleeding of gum tissues where implants are placed. This also enhances patient comfort and speeds healing time.

As a **neuromuscular dentist**, I take great pride in the precision fit of every restored tooth, including those attached to implants. Through proper bite alignment, our patients are able to avoid many issues that can result.

YOU are the reason we are here! We are glad to be entrusted with so many smiles for implant, cosmetic, restorative and general dentistry. As always, we welcome new patients and greatly appreciate those you refer.

Have a beautiful Autumn!

Dr. Ban Barbat & Staff
